

JJ Tech's Model 1.6 is commonly used in a concentric string configuration for Gas Well Deliquifcation. Jet Pump is run in on Coiled Tubing or small Integral Joint tubing inside of production tubing. The Jet Pump Carrier is easily retrieved to the surface by pumping in reverse. Nozzle and Mixing Tube changes are easily done due to the simplicity of the tool.

Features / Advantages / Benefits

- Multiple exit ports improves discharge flow distribution
- 1.6 Production Rates up to 600 bbls/day
- Nozzle and Mixing Tube changes are simple due to small, easy to handle, JJ Tech Carrier design
- Housing Materials Available:
 - 17-4 PH -Standard
 - 316 Stainless
 - 420 SS Boronized
 - Hastelloy X
- Versatile Top And Bottom Connections
- All Viton elastomers (O-Rings)
- Anti-Hang Standing Valve design prevents fluid from entering the formation

1.66" Concentric String Jet Pump

Available Top & Bottom Connections
