

JJTECH

CUTTING EDGE ARTIFICIAL LIFT

ARTIFICIAL LIFT **SERVICE & SUPPORT**

SERVICE IS OUR STRENGTH

Our commitment runs deep

DRIVEN TO DELIVER

Solutions and service that power performance for our customers

Our Mission.

For over 20 years, JJ Tech has built a legacy of providing highly reliable, technologically-advanced, artificial lift production systems with customized solutions, superior service and after-sale on-site support. We are:

On Call

JJ Tech Service Technicians are available when you need us.

On Time

We understand that downtime is critical, so we are there when we promise.

On Point

Our team of experienced technicians come prepared with what is needed to complete the job.

Knowledgeable. Trained. Experienced.

The more you know, the better. We provide excellent service and share our knowledge with our customers.

- JJ Tech offers training for your field personnel to better prevent mechanical failures.
- We also provide Preventative Maintenance recommendations to prevent unexpected downtime.
- Our team includes over two dozen skilled professionals dedicated to quickly resolving problems and keeping your operation running.
- Veriforce and ISNetworld compliant.

Service After the Sale.

Our customers have direct access to our Project Managers and Service Technicians. If you call, we answer (no “Customer Hotlines” that are just messaging services!).

Our Technicians provide a detailed explanation of repairs, what caused a failure, and preventive measures to avoid recurring issues.

Maintenance & Repair Services.

All rotating equipment needs to be maintained. JJ Tech’s comprehensive service solutions and maintenance plans enhance reliability and performance throughout the equipment’s operational life. Our factory-trained technicians respond quickly and provide everything from routine maintenance to emergency repairs, utilizing advanced diagnostics to identify potential issues and reduce costly downtime.

Depending on pump operating conditions, servicing intervals can vary widely. We will design a tailored preventive maintenance plan to minimize downtime from unplanned events. In addition, a JJ Tech preventative maintenance plan offers discounted rates for servicing as well as reduced pricing for all wear components and pump parts.

With a preventative maintenance plan and our advanced technology, you will save with reduced downtime, fewer failures and workovers, while optimizing energy usage with greater operational reliability and ROI.

Contact your JJ Tech representative to start designing your plan.

Unsurpassed Parts Inventory.

With the right parts to fix a problem, downtime is minimized. That’s why parts are a priority for JJ Tech.

- We maintains the world’s largest inventory of Wanner™ Hydra-Cell Pro® T&Q Series Pumps and Components.
- We also inventory more Jet Pumps and parts than anyone else in the business.
- SELECT-JET™, Concentric String, and Sliding Sleeve Adaptations are kept in-stock. No long lead-times for special applications.

JJ Tech Jet Pumps and our Hydraulic Lift Solutions are designed, built and supported in the USA.

Rapid Response.

JJ Tech takes pride in rapid response that exceeds expectations. Not only will we answer the call with qualified Service Technicians, we are equipped to respond from our centralized service locations – arriving on-site for service typically within hours, rather than days. Often, we are on the scene the same day.

Here Where You Need Us.

Our service centers are centrally located to serve you better and with help that arrives faster:

- **Shreveport, LA** (headquarters) serving E. Texas, Louisiana, Mississippi, Arkansas and Oklahoma
- **Odessa, TX** serving the Permian Basin
- **San Antonio, TX** (Poteet) serving Eagle Ford
- **Victoria, TX** serving S.E. Texas

WANNER™
HYDRA-CELL PRO®
SEAL-LESS PUMP TECHNOLOGIES

ABOUT JJ TECH

Founded in 2002, JJ Tech is a US-based company that supplies artificial lift systems to the oil and gas industry worldwide.

JJ Tech's innovative jet pump was developed to produce large volumes of subsurface formation fluids, with inclusions of moderate to high solid content. Our unique, patented design allows easy retrieval of the pump from the hole for replacement of the nozzle or mixing tube. Retrieval is accomplished by adjusting the surface valves and reversing the circulation of fluid with the existing surface pump – no wireline or workover rig is required.

JJ Tech holds patents in the US and in various countries on both its hydraulic jet pump and its breakthrough ULTRA-FLOW™ artificial lift system. This unique and powerful solution combines our hydraulic Jet Pump technology downhole with the revolutionary Wanner™ Hydra-Cell Pro® diaphragm surface pump to offer the industry a cutting-edge artificial lift solution superior to alternatives when dealing with a range of challenging downhole issues including:

- Producing Horizontal and Deviated Wells
- Slow Frac Flowback
- Gas Well Dewatering
- Low Oil Production
- Producing Sand and Other Solids
