

FLEXIBLE LEASING WITH PURCHASE OPTION

Keep your production moving while preserving CAPEX

JJ Tech Does Leasing Better

JJ Tech Leasing Programs give operators a low-risk way to deploy artificial lift and SWD pumping equipment quickly, preserve capital, limit surprise maintenance costs, and retain the option to purchase only after performance is proven in the field.

Whether you need short-term unloading after a recent frac or frac hit, long-term artificial lift, or a SWD pumping solution, JJ Tech provides flexible lease terms.

All leases include routine maintenance, ongoing technical support, and the option to purchase on your timetable.

JJ Tech Lease Benefits

- ★ Test performance on your wells before committing to ownership
- ★ Preserve CAPEX and borrowing capacity by shifting equipment costs to OPEX
- ★ Reduce unexpected operating costs, *such as Plunger Pump packing and H-Pump thrust chambers*, with included routine/preventive maintenance
- ★ Scale faster by adding, redeploying, or upgrading equipment as field conditions change
- ★ Apply eligible lease payments toward a defined purchase option

Equipment Solutions for Your Unique Challenges

Flexible Lease Terms

Lease Term	JJ Tech	Industry Standard
Billing Start Date	First day of Operation	When Equipment leaves Yard
Routine/ Preventive Maintenance	Included	Billed Separately
Reconditioning after Lease	Included	Billed Separately
Downhole Jet Pump	Available to Lease	Purchase Required
Optimization Support	Included	Varies by Provider
Service Response	Priority Service	Varies by Provider

Purchase Option Credit

Eligible lease payments may be partially applied toward a pre-agreed purchase price:

- **100%** of lease payments from days 1-30
- **50%** from days 31-90

Simple Lease Path

1. Confirm the application

Select the pump package for your needs

2. Deploy a field-ready unit

Lease billing starts on the first day of operation

3. Validate performance

Extend your lease or exercise purchase option

Ready to Deploy Lease Equipment

JJ Tech maintains field-ready equipment for rapid deployment. Available equipment includes JJ Tech ULTRA-FLOW™ Jet Lift systems for artificial lift, SWD pump systems, SELECT-JET™ downhole pumps, VFDs, and Power Fluid Vessels.

Typical Applications

- Short-term unloading after frac or frac-hit events
- Long-term artificial lift applications
- Saltwater disposal pumping solutions
- Rapid replacement or redeployment needs

Reliability and Performance

All JJ Tech surface pump systems feature Wanner Hydra-Cell Pro® positive displacement diaphragm pumps, selected for demanding operating conditions and a more predictable maintenance profile.

All leased systems and equipment are new or reconditioned to like-new standards. Before deployment, each unit is inspected, serviced, and tested to confirm field readiness.

Available Lease Equipment | JJ Tech

JJ Tech has a wide range of surface pumping equipment ready to go for Jet-Lift and Saltwater Disposal. Contact JJ Tech to confirm fit, timing, and configuration.

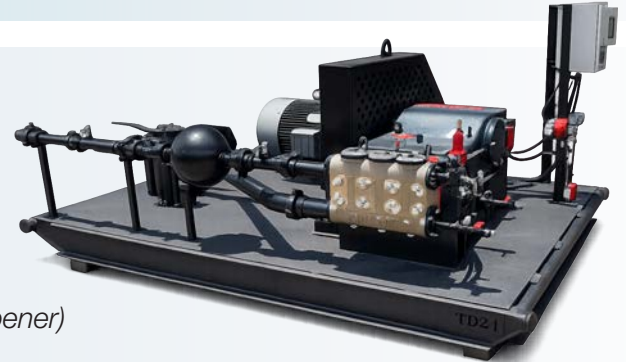

Support is Included in Every Lease

- Routine/preventive maintenance
- Ongoing technical support
- Priority service response
- Post-lease equipment reconditioning

ULTRA-FLOW™ Jet Lift Systems

Featuring Wanner Hydra-Cell Pro® positive displacement diaphragm pump technology, designed for reliable performance in demanding artificial lift applications

- 60 / 100 / 155 / 200 / 330 HP (*Up to 4500psi*)
- Complete with Safety System (*Filtration, Flowmeter and Dampener*)

SWD Pump Systems

Wanner Hydra-Cell Pro® pumps ensure fewer routine wear-part issues than conventional packed plunger pump designs and a more predictable operating cost profile.

- 60 / 100 / 155 / 200 / 330 HP
- Up to 11,000 BPD (*Up to 2100psi*)

SELECT-JET Downhole Pumps

Versatile Bottom Hole Assembly (*Normal or Reverse Flow*)

- H₂S Resistant materials available
- Isolation Sleeve ensures reliability over Sliding Sleeve

Downhole Gauges

- Installed and retrieved inside Jet Pump (*No Wireline required*)
- Pressure and Temperature Data Logger

Variable Frequency Drives

- Skid Mounted, NEMA 3R Enclosures
- 75hp / 100hp / 200hp / 350hp

Power Fluid Vessels

Constant clean source of power fluid for jet pumping

- Standard 6' x 10' vessel (*55 BBL*)
- 275 psi
